

The diagram illustrates a state transition for a graph grammar. It starts with a transition labeled '[' leading to a state. From this state, there are two parallel paths, each containing a choice between 'KW_WS' and 'TAB' (indicated by a vertical line), followed by an 'identifier' transition. These paths are enclosed in a larger structure. After this, there is a transition labeled ']' leading to another state. From this second state, there are several transitions: 'TAB', 'GRAPH_CH', '|', '<string>', 'CH', 'KW_WS', 'KW_NL', and 'KW_NONSPACE'. The transitions 'KW_WS', 'KW_NL', and 'KW_NONSPACE' are highlighted with blue boxes, while the others are in grey boxes. The entire diagram is enclosed in a large rounded rectangle.
