

The diagram illustrates the transitions for a graph grammar. It starts with a transition labeled '[' leading to a state. From this state, there are two parallel paths, each containing a transition labeled 'identifier' followed by a transition labeled 'KW_WS' and then 'TAB'. These paths are grouped by a large curly brace. After this, there is a transition labeled ']' leading to another state. From this second state, there are several transitions: 'TAB', 'GRAPH_CH', '|', '<string>', 'CH', 'KW_WS', 'KW_NL', and 'KW_NONSPACE'. The transitions are represented by arrows connecting states, with non-terminals in boxes and terminals in octagons.
